Figma

`Figma, Adobe XD, Marvel, Sketch,...?`

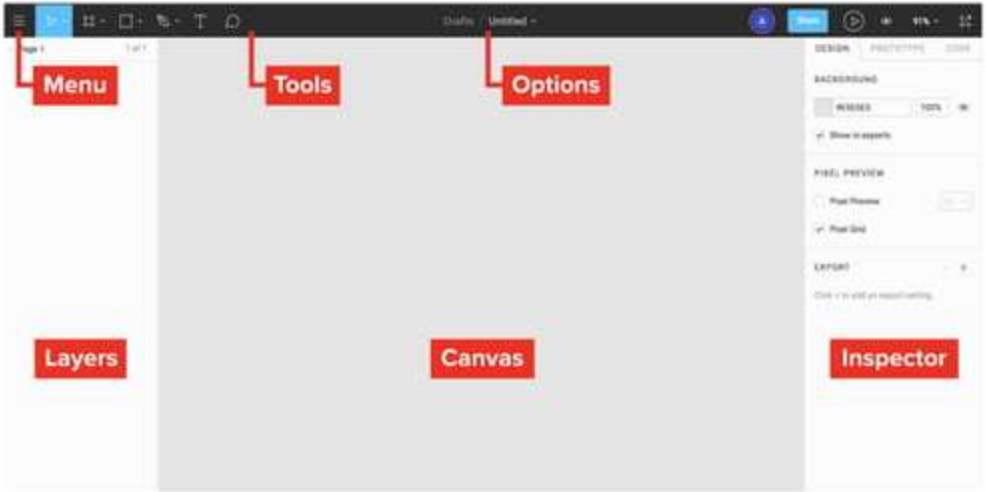
Figma is a powerful design tool that helps you to create anything: websites, applications, logos, and much more.

Create an Figma account

Follow this link and create an account:

Figma: the collaborative interface design tool.

Figma interface



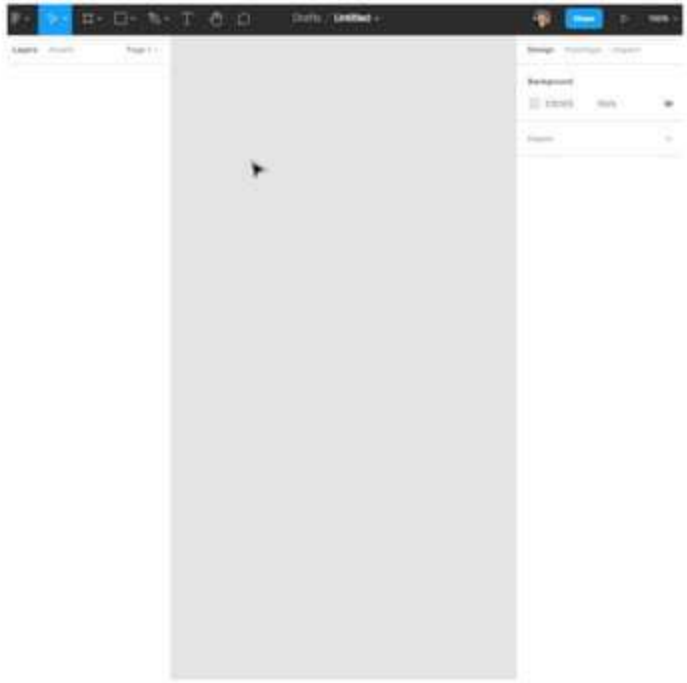
Frame

`Make a frame in Figma`

Frame is the same as a page, and it's where our design will live.

Press + or - to zoom out or zoom in

- Select the Frame tool from the top menu
- Select the Frame size on the right panel

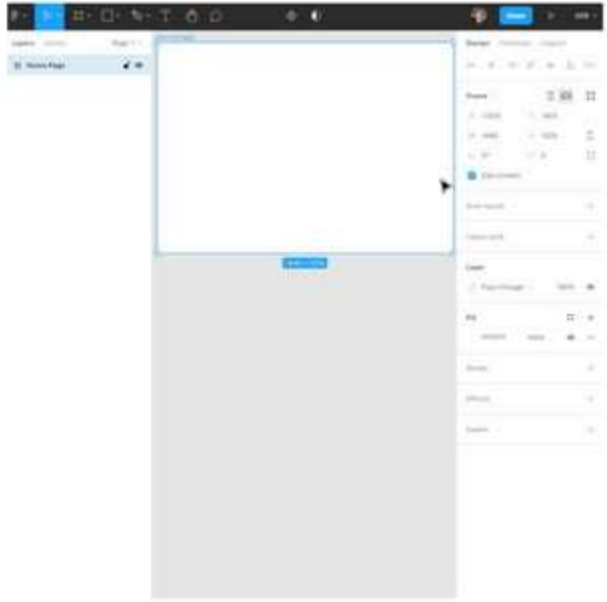


Grids and Columns in Figma

How can I align contents?

You will want to add grids that help you keep the alignment of content for your page consistent.

- Select the frame you wish to grid
- Select Layout Grid on the right panel
- Select Columns and 12 units

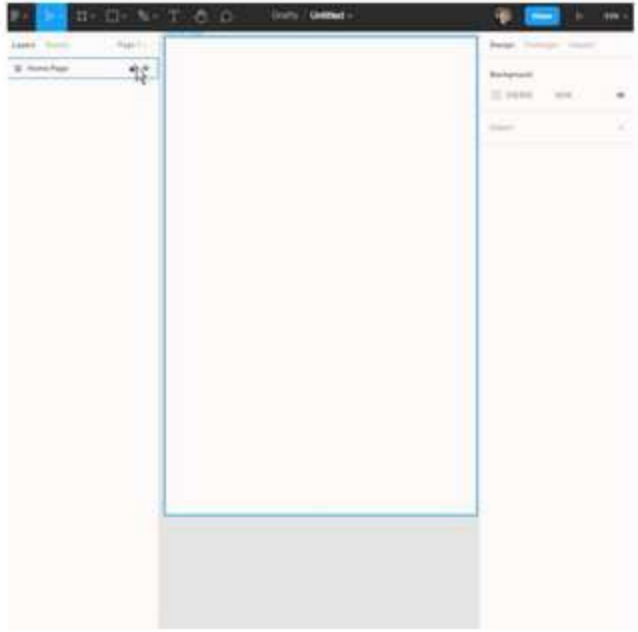


Shapes in Figma

⊙ΔC

Use the shapes and elements in Figma to create squares, circles, lines, and more. These are the fundamentals for creating a design on a page.

- Select Square Shape tool
- Create a square
- Begin to shape and size it

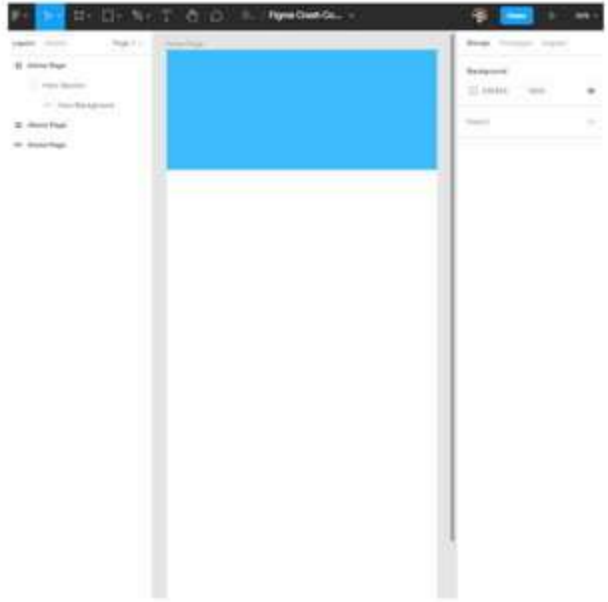


Add images in Figma

`We cannot design without images`

You can add images from an online source or locally to your page. Images are an important part of designing a website, especially for the hero section.

- Drag and drop an image from you local computer
- Import an image from the shapes image upload option
- Resize and place the image on the design

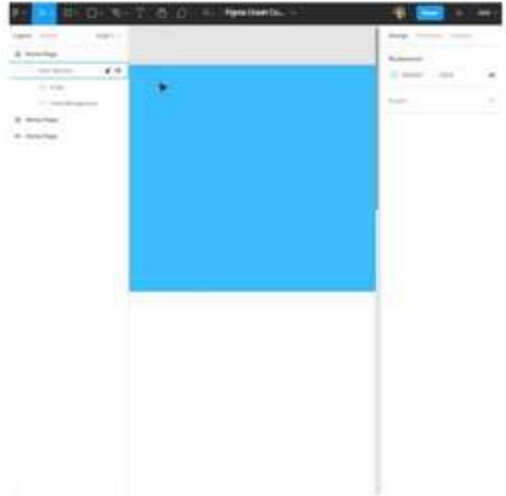


Add Text in Figma

abcxyz

To add text to a design, select the text tool and place it on the page. The font will default to Roboto, but you can change the font family, size, and color at any stage.

- Select the Text tool
- Add "About" text as the start of the navigation
- The size and color are 24 and white

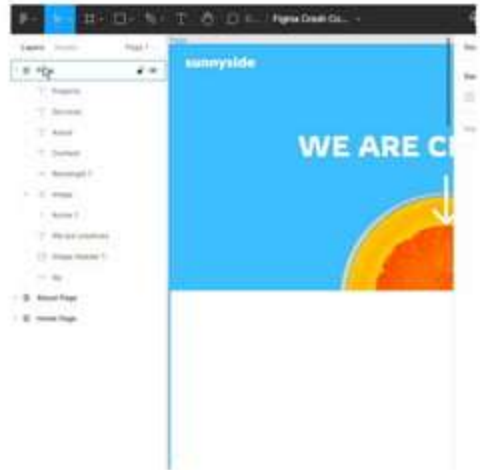


Label elements, groups

`Groups help us to manage our design`

Working with lots of layers in Figma can get confusing, so label all your elements as soon as you create them. Even better is to group different sections and shapes with labels such as "Hero Background" or "Navbar".

- Select your element/s and right click to group or press Ctrl + G
- Name your group
- Places groups inside groups for each section of your page to improve readability once your page gets large



Components in Figma

How to reuse a button design

Components are elements you can reuse across your designs. They help to create and manage consistent designs across projects.

Figma
Components

Color picker

`Pick a color anywhere`

Use the color picker to apply solid fills, gradients, or images. You can also control the hue, saturation, or opacity of a color, as well as apply blend modes.

Prototype interactions

`Test UI before coding`

Protype replicate how users might interact with your designs. You can make connections between frames to create flows, or pathways, through an interactive design.

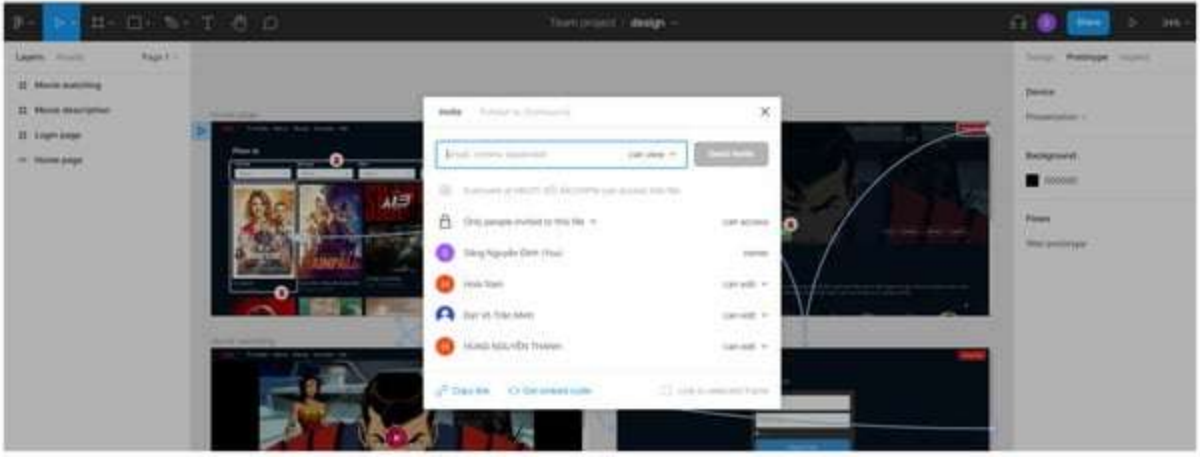
Share and preview prototype

Show your works

How can we share our prototypes, how can we get feedbacks from our teammates?

Share design area



Share prototype

Get feedbacks

How to get feedbacks from your team?

1. Click in the toolbar, or press C to enter comment mode. Your cursor will turn into a .
2. Select a location to comment on:
    - Click the location on the canvas where you'd like the comment to be pinned.
    - Or, click and drag your cursor to select a region to comment on.
3. Type your message in the field. Click the emoji icon to add emoji or press @ to mention a colleague or collaborator.
4. Click to send your message.

“

A user interface is like a joke. If you have to explain it, it’s not that good.

— Martin LeBlanc
